Re: January 5, 2007 Addendum to the November 1, 2006 Notification of Self Implementing Cleanup and Disposal of Polychlorinated Biphenyl Waste at Building 386 in Investigation Area C2, Eastern Early Transfer Parcel, Mare Island, Vallejo, California

Dear Mr. Farley:

EPA has reviewed your January 5, 2007 addendum to the notification regarding the above referenced site. EPA concurs with your cleanup proposal.

Building 386 is part of a former metalworking facility complex comprising four adjacent buildings. Eighteen of 66 solid samples contain PCBs exceeding the 1 mg/kg cleanup goal, in concentrations as high as 11.2 mg/kg. Your original notification of November 1, 2006 excavate 5 by 5 foot sections around each of the 18 samples exceeding the cleanup goal to a depth of 6 inches and collect verification samples, and continue to excavate until the 1 mg/kg cleanup goal is achieved. Following a subsequent site visit with Carolyn d'Almeida of this office, it was determined that five of the sample locations exceeding the cleanup goal could not be determined.

Based upon your January 5 2007 addendum, you are now planning to over excavate three additional areas in dimensions of 30 by 25, 20 by 25 and 10 by 10 feet and collect verification samples to ensure that all of the contamination is removed. Additionally, you will collect samples from the two oil-stained concrete pads that were identified during the site visit to verify that they do not contain PCBs.

Please feel free to contact Carolyn d'Almeida at (415) 972-3150 if you have any questions about this letter.

Sincerely,

A handwritten signature in black ink, appearing to read "Kathleen Johnson", is written over a horizontal line.

Re: January 5, 2007 Addendum to the November 1, 2006 Notification of Self Implementing Cleanup and Disposal of Polychlorinated Biphenyl Waste at Building 386 in Investigation Area C2, Eastern Early Transfer Parcel, Mare Island, Vallejo, California

Dear Mr. Farley:

EPA has reviewed your January 5, 2007 addendum to the notification regarding the above referenced site. EPA concurs with your cleanup proposal.

Building 386
Building 98 is part of a former metalworking facility complex comprising four adjacent buildings. Eighteen of 66 solid samples contain PCBs exceeding the 1 mg/kg cleanup goal, in concentrations as high as 11.2 mg/kg. Your original notification of November 1, 2006 proposed to excavate 5 by 5 foot sections around each of the 18 samples exceeding the cleanup goal to a depth of 6 inches and collect verification samples, and continue to excavate until the 1 mg/kg cleanup goal is achieved. Following a subsequent site visit with Carolyn d'Almeida of this office, it was determined that five of the sample locations exceeding the cleanup goal could not be determined. Based upon your January 5, 2007 addendum, you are now planning to over excavate three additional areas in dimensions of 30 by 25, 20 by 25, and 10 by 10 feet and collect verification samples to ensure that all of the contamination is removed. Additionally, you will collect samples from the two oil-stained concrete pads that were identified during the site visit to verify that they do not contain PCBs.

Please feel free to contact Carolyn d'Almeida (415-972-3150) if you have any questions about this letter.

Sincerely,

A handwritten signature in black ink, appearing to read "Kathleen Johnson".
